Assignment: HW-7 [Sections 10.7 & 10.8]

3. (a) Find the series' radius and interval of convergence. Find the values of x for which the series converges (b) absolutely and (c) conditionally.

$$\sum_{n=0}^{\infty} \frac{(x-3)^n}{5^n}$$

(a) The radius of convergence is .
(Simplify your answer.)

Determine the interval of convergence. Select the correct choice below and, if necessary, fill in the answer box to complete your choice.

- ☒ A. The interval of convergence is .
(Type a compound inequality. Simplify your answer. Use integers or fractions for any numbers in the expression.)
- ☐ B. The series converges only at $x =$. (Type an integer or a simplified fraction.)
- ☐ C. The series converges for all values of x .

(b) For what values of x does the series converge absolutely?

Select the correct choice below and, if necessary, fill in the answer box to complete your choice.

- ☒ A. The series converges absolutely for .
(Type a compound inequality. Simplify your answer. Use integers or fractions for any numbers in the expression.)
- ☐ B. The series converges absolutely at $x =$. (Type an integer or a simplified fraction.)
- ☐ C. The series converges absolutely for all values of x .

(c) For what values of x does the series converge conditionally?

Select the correct choice below and, if necessary, fill in the answer box to complete your choice.

- ☐ A. The series converges conditionally for .
(Type a compound inequality. Simplify your answer. Use integers or fractions for any numbers in the expression.)
- ☐ B. The series converges conditionally at $x =$.
(Type an integer or a simplified fraction. Use a comma to separate answers as needed.)
- ☒ C. There are no values of x for which the series converges conditionally.
